

CIMARRON BULLETS

For those of you that were shooting Anvil Al's bullets, I have found a new bullet maker very close to me, that I introduced to Cowboy Action bullets, he was very receptive and purchased molds for the 38 105gr, and the 38 125gr, all of his bullets are poly-coated, which is a three step baked on process. There is no leading whatsoever in your guns, a lot less smoke produced, no wax lube is needed, and your guns are much easier to clean. I have been helping him get started selling them for about a month. They have been very well received and those that are using them absolutely love them. **Phantom** is carrying them in his shop and will be shooting them when he returns very soon.

I will have 5000 of each with me on Saturday plus some sample packs if anyone would like to try them. If anyone would like to buy any large quantity please email me and let me know so I will have enough and if you have any questions feel free to email or call me anytime. If you would like to check out his website the address is cimarronbullets.com

Thanks and see you Saturday
